UNDERSTANDING AND MAINTANCE OF NETWORK

DAY3

TASKS:1

Log in to your home Wi-Fi router's admin panel using its default IP address (usually 192.168.0.1 or 192.168.1.1) and take a screenshot of the login page.

Hint: If you don't know your router's IP, open Command Prompt and run 'ipconfig' — look for 'Default Gateway'.

RESULT

STEPS:-

1.Connect your laptop or mobile to your Wi-Fi.

2.Press **Windows + R**, type **cmd**, and press **Enter**.

3.Type:ipconfig

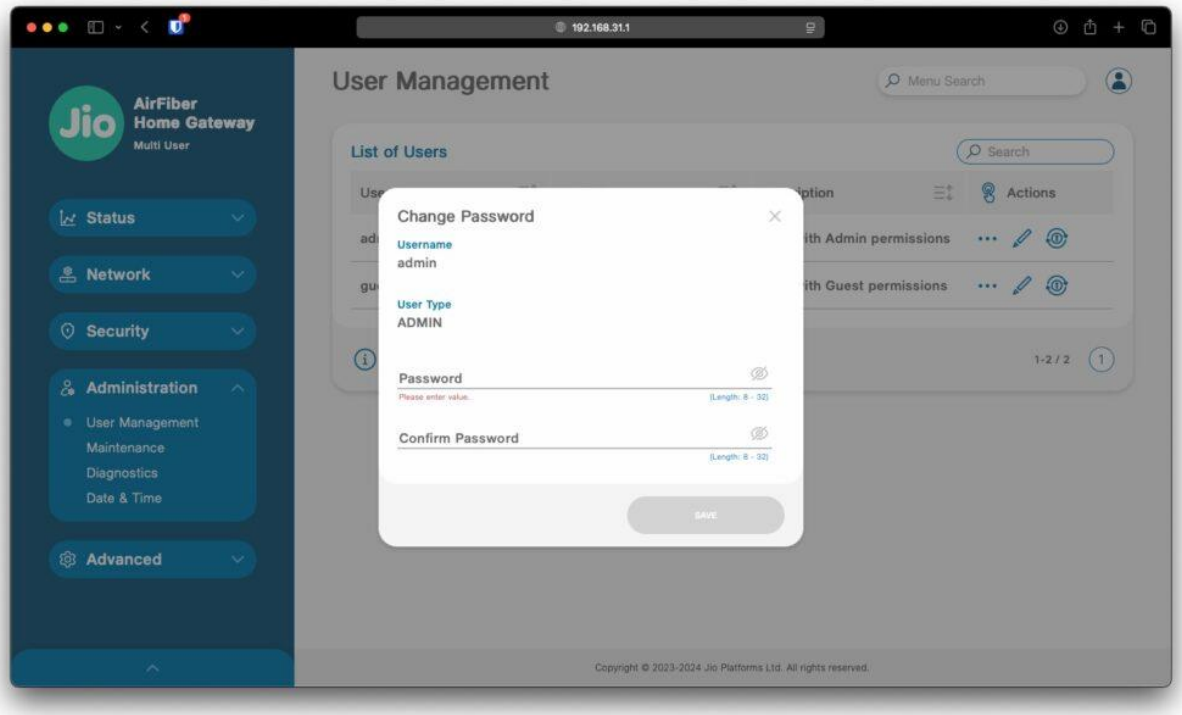

4.Find the **Default Gateway** (for example, 192.168.1.1).

5.Open a web browser.

6.Enter the Default Gateway IP (such as http://192.168.1.1) in the address bar.

7.The router login page will appear.

TASKS:2

Find and note down the current IP address, subnet mask, and default gateway assigned to your laptop or mobile device when connected to your Wi-Fi network.

RESULT

STEPS:-

1.Open **Command Prompt**.

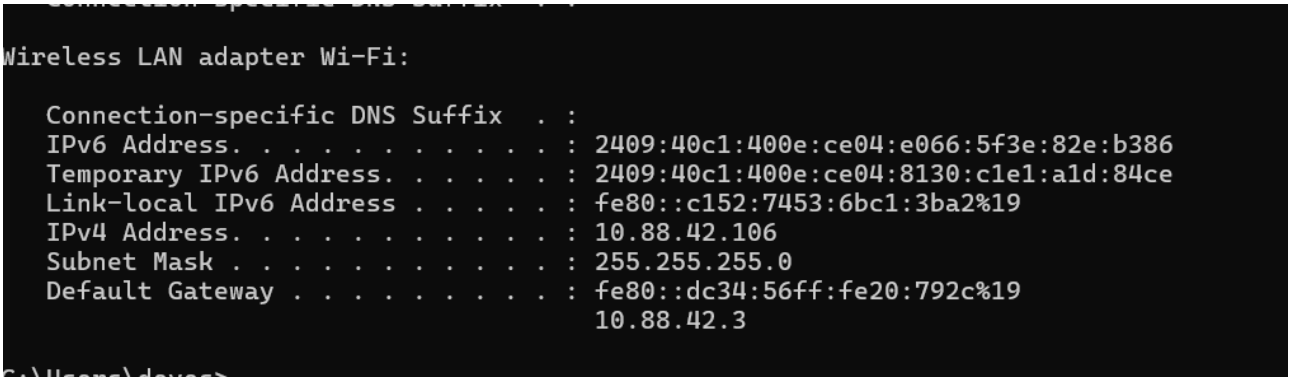

2.Type: ipconfig

3.note the following

Setting	**Example Value**
IP Address	192.168.1.100

Comptia A+

Subnet Mask	255.255.255.0
Default Gateway	192.168.1.1

TASKS:3

Change your device's IP address from 'Obtain IP automatically' (DHCP) to a static IP in the same range as your router (for example, set it to 192.168.1.50 if your router is 192.168.1.1), and test if you still have internet access.Remember to revert to automatic/DHCP after testing to avoid network issues.

RESULT

STEPS:-

1. Open **Control Panel**.
2. Go to **Network and Sharing Center**.
3. Click **Change adapter settings**.
4. Right-click **Wi-Fi** → **Properties**.
5. Select **Internet Protocol Version 4 (TCP/IPv4)**.
6. Click **Properties**.
7. Select **Use the following IP address**.
8. Enter:

Setting	Example
IP Address	192.168.1.50
Subnet Mask	255.255.255.0
Default Gateway	192.168.1.1
Preferred DNS	8.8.8.8
Alternate DNS	8.8.4.4

9. Click **OK**.
10. Open a browser and check if the Internet works.
11. After testing, return to **TCP/IPv4 Properties**.
12. Select **Obtain an IP address automatically** and **Obtain DNS server address automatically**.
13. Click **OK**.

TASKS:4

In your router's admin panel, locate the section where you can view or change the DHCP range. Write down the current range, and explain in 2-3 lines what would happen if two devices are assigned the same IP address in this range.

RESULT

STEPS:-

1. Log in to the router admin panel.
2. Open the **LAN** or **DHCP Server** section.
3. Note the DHCP IP address range.
4. SAMPLE DHCP RANGE

Comptia A+

Setting	Example
Start IP	192.168.1.100
End IP	192.168.1.200
