

# DAY 3

## TOPIC

- **Peripherals troubleshooting theory**
- **Common issues and solutions for Peripherals**
- **Troubleshoot a non working printer**

## TASKS:1

List 5 common issues users face with USB keyboards or mice on laptops, and write one possible solution for each.

## RESULT

### Common USB Keyboard/Mouse Problems and Solutions

| No. | Common Issue                                 | Possible Solution                                                        |
|-----|----------------------------------------------|--------------------------------------------------------------------------|
| 1.  | <b>Keyboard or mouse is not detected</b>     | Unplug the USB device and reconnect it to another USB port.              |
| 2.  | <b>Keyboard/mouse stops working suddenly</b> | Restart the laptop and reconnect the device.                             |
| 3.  | <b>USB port is not working</b>               | Try a different USB port and check whether other USB devices work there. |

| No. | Common Issue                                      | Possible Solution                                                                                          |
|-----|---------------------------------------------------|------------------------------------------------------------------------------------------------------------|
| 4.  | <b>Mouse cursor moves slowly or does not move</b> | Clean the mouse sensor and use it on a suitable flat surface.                                              |
| 5.  | <b>Some keyboard keys do not work</b>             | Clean around the affected keys and reconnect the keyboard; if the problem continues, try another keyboard. |

## TASKS:2

Simulate a troubleshooting flow: Your Bluetooth headphones are not connecting to your phone. Write the exact step-by-step actions you would take to diagnose and fix the issue, mentioning any settings or indicators you would check.

## RESULT

### Troubleshooting Bluetooth Headphones

- First, I would make sure the **headphones are switched ON** and have enough battery.
- I would check whether the **Bluetooth indicator/light** on the headphones is blinking, which usually means they are ready to pair.
- On my phone, I would open **Settings → Bluetooth** and turn Bluetooth ON.

- I would check the list of **Available Devices** and look for my headphones.
- I would tap the headphone name and select **Pair/Connect**.
- If the headphones do not appear, I would turn Bluetooth OFF and ON again on the phone.
- I would make sure the headphones are not already connected to another nearby device.
- If they are still not connecting, I would select the headphones under **Paired Devices**, choose **Forget/Unpair**, and try pairing them again.
- I would restart both the **phone and headphones** and repeat the pairing process.
- Finally, I would check the phone's **Bluetooth settings and headphone battery/status indicator** to confirm that the headphones show as **Connected**.

## TASKS:3

A user reports that their external webcam is not detected during a Zoom call on Windows 10. Write a checklist of 6 things to check or try to resolve the problem.

# RESULT

## Webcam Troubleshooting Checklist – Windows 10

- ☒ **Check the USB connection** – Unplug the webcam and reconnect it, or try another USB port.
- ☒ **Check Device Manager** – Open **Device Manager** → **Cameras/Imaging Devices** and see if the webcam is detected.
- ☒ **Update the webcam driver** – Right-click the webcam in Device Manager and select **Update Driver**.
- ☒ **Check Camera Privacy Settings** – Go to **Settings** → **Privacy** → **Camera** and turn on camera access.
- ☒ **Check Zoom permissions** – Make sure Zoom is allowed to access the camera.
- ☒ **Select the correct camera in Zoom** – Go to **Zoom** → **Settings** → **Video** and select the external webcam. Check the video preview.

## TASKS:4

You are helping a friend whose printer is showing 'offline' status on their PC. Describe how you would use the Windows Troubleshooter tool to try to fix the issue, and explain what information the tool provides during the process.

# RESULT

## Using Windows Troubleshooter to Fix an Offline Printer

1. **Open Settings** – Click **Start** → **Settings** → **Devices** → **Printers & scanners**.
2. **Select the Printer** – Choose the printer that is showing **Offline**.
3. **Run the Troubleshooter** – Click **Manage** and select **Run the troubleshooter** if the option is available.
4. **Follow the Instructions** – Windows will automatically check the printer and its connection.
5. **Review the Results** – The troubleshooter may identify problems such as connection issues, incorrect printer settings, driver problems, or the printer being unavailable.
6. **Apply the Recommended Fix** – Follow the suggested solution and then check whether the printer status changes from **Offline** to **Ready/Online**.

## Information Provided by the Troubleshooter

The Windows Troubleshooter tells you:

- What problem it detected.
- Whether the printer is connected properly.
- Whether there are driver or configuration issues.
- What actions Windows recommends or automatically performs.
- Whether the problem was successfully resolved.
