COMPTIA N+

N+ NETWORK FUNDAMENTALS AND BUILDING NETWORKS

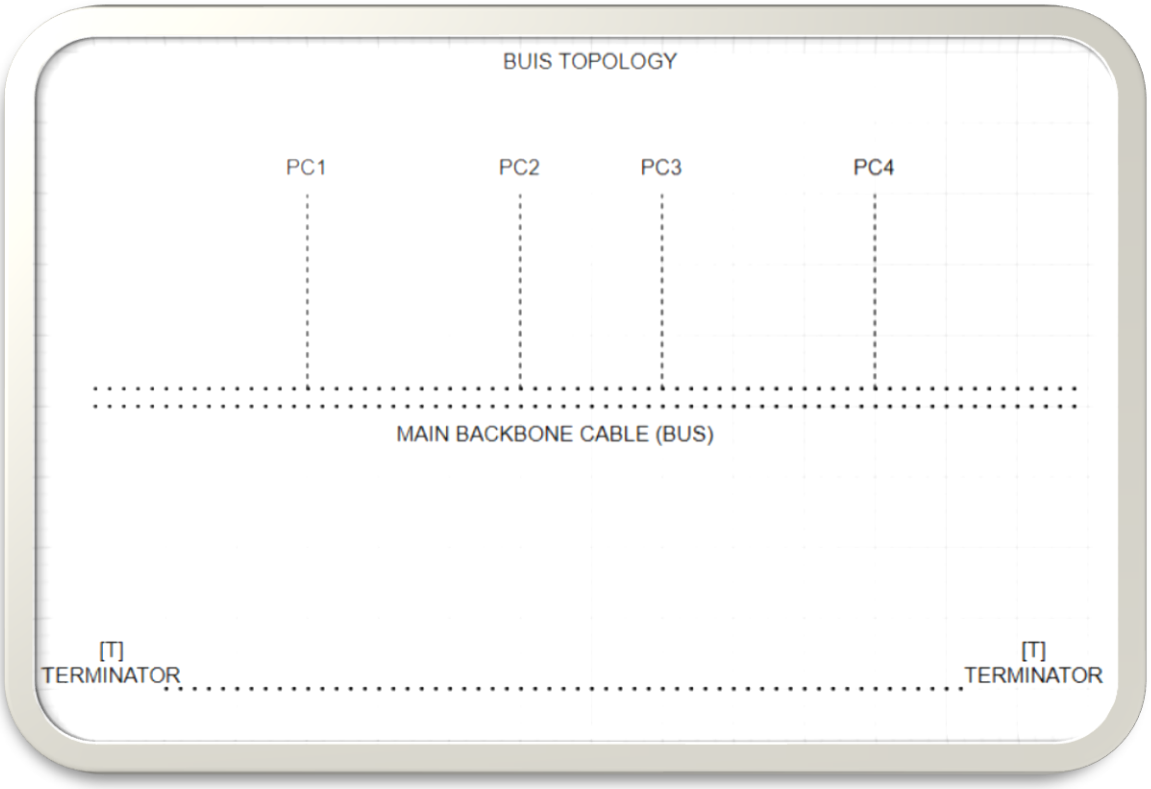

NETWORK TOPOLOGIES THEORY

DAY2

TASKS:1

Draw a diagram of a bus topology and label all key components, then write one real-world example where this topology might be used.

RESULT

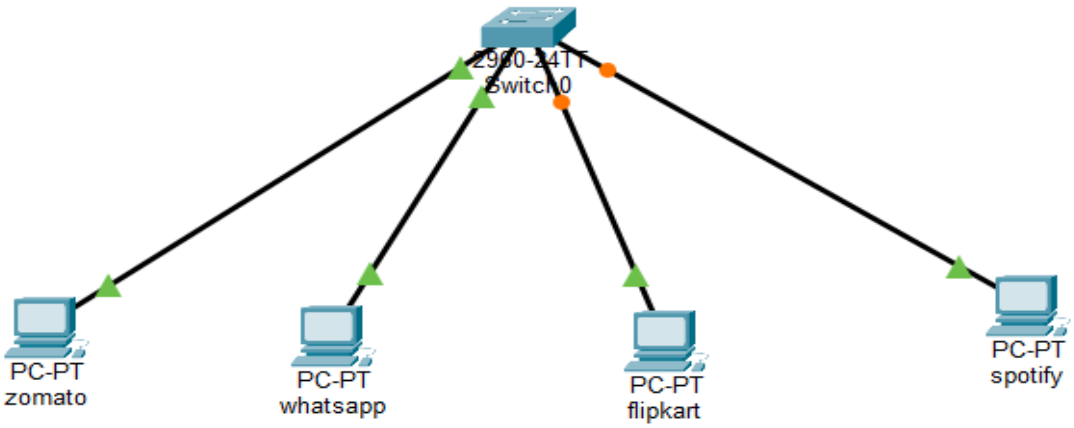

TASKS:2

In Cisco Packet Tracer, create a simple star topology with one switch and four PCs connected to it; name each PC after a popular app (e.g., WhatsApp, Zomato, Spotify, Flipkart) and take a screenshot of your topology.

COMPTIA N+

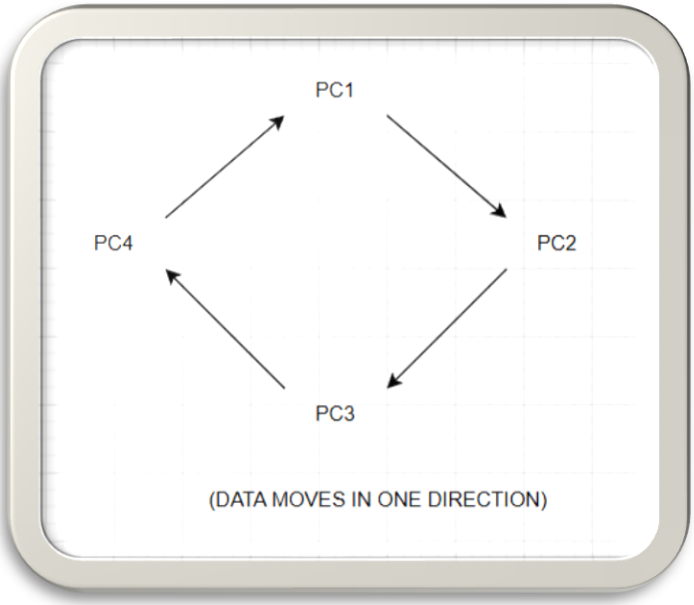

RESULT

TASKS:3

Draw a ring topology diagram and explain in 2-3 sentences how data travels between devices in this setup. Use arrows to show the direction of data flow.

RESULT

COMPTIA N+

In a **Ring Topology**, each computer is connected to two other computers, forming a closed circle. Data travels in one direction around the ring until it reaches the destination device. If one connection fails, communication may stop unless a dual-ring system is used.

TASKS:4

Compare mesh and star topologies by listing 2 advantages and 2 disadvantages of each in a table format.

RESULT

Feature	**Mesh Topology**	**Star Topology**
Advantage 1	Very reliable because multiple paths are available.	Easy to install and manage.
Advantage 2	If one cable fails, communication continues.	Easy to add or remove devices.
Disadvantage 1	Requires many cables.	If the central switch fails, the whole network stops.
Disadvantage 2	High installation cost.	Uses more cable than Bus topology.
