CompTia N+

Introduction of Networks

Tasks:-1

Draw a simple diagram (hand-drawn or digital) showing how your phone connects to Instagram, including your device, WiFi router, ISP, and Instagram server. Label each part and the connections.

RESULT

Tasks:-2

List 5 devices you use or see daily that are part of a network (for example: smartphone, smart TV, WiFi router, laptop, smartwatch). For each, write what type of network it connects to (LAN, WAN, PAN, etc.).

RESULT

No.	Device	Network type	Example/use
1.	Smartphone	PAN/WAN	Connects to Wi-Fi or mobile Internet.
2.	Smart tv	LAN/WAN	Connects to home Wi-Fi and the internet.
3.	Wi fi router	LAN\WAN	Connects home deviceto the internet.
4.	Laptop	LAN\WAN	Connect to wi fi and the internet
5.	Smartwatch	PAN	Connect to a smartphone using Bluetooth

Tasks:-3

Explain the difference between the Internet and an intranet using an example from your college or a public WiFi you have used.

RESULT

Feature	Intranet	Internet
Audience	Private (students, staff, employees)	Public (anyone worldwide)
Access Control	Requires specific login, IP range, or local connection	Open access; publicly addressable IP addresses
Security	High (protected by firewalls and strict access policies)	Variable (susceptible to public cyber threats)
Ownership	Owned and managed by a single organization	Decentralized; no single owner or governing body
Scope	Local or organizational (LAN/WAN)	Global

Example:

When I connect my phone to public Wi-Fi at college, I can use the Internet to open Google, YouTube, or Instagram. If the college provides a private network that allows students to access only the college student portal, attendance, notices, or internal resources, that network is an intranet.

Tasks:-4

Pick any one app you use (like WhatsApp, Zomato, or Flipkart) and describe, in 4-5 lines, how data travels from your device to their server and back when you perform a search inside the app.

RESULT

I CHOOSE WHATSAPP

WhatsApp

When I search for something in WhatsApp, my phone sends the search request through **Wi-Fi/mobile network** to the **Internet**. The request passes through my **Wi-Fi router or mobile network and ISP** and reaches the **WhatsApp server**.

The WhatsApp server processes the search request and finds the required information.

The result is then sent back through the Internet to my phone. Finally, the WhatsApp app displays the search results on my screen.
