

TOPIC

- **Operating System information, windows, Linux, macOS installation and adjust OS settings**

TASKS:1

On your Windows laptop or PC, open 'System Information' and take a screenshot showing your OS version, processor, and RAM details.

RESULT

The screenshot displays the Windows System Information window. The left sidebar shows the 'System Summary' tab selected. The main pane lists various system items and their values. Key details include:

Item	Value
OS Name	Microsoft Windows 10 Pro
Version	10.0.19045 Build 19045
Other OS Description	Not Available
OS Manufacturer	Microsoft Corporation
System Name	DESKTOP-4EDPRTG
System Manufacturer	System manufacturer
System Model	System Product Name
System Type	x64-based PC
System SKU	SKU
Processor	Intel(R) Pentium(R) CPU G2020 @ 2.90GHz, 2900 Mhz, 2 Core(s), 2 Logical Pro...
BIOS Version/Date	American Megatrends Inc. 0503, 21-07-2014
SMBIOS Version	2.7
Embedded Controller Version	255.255
BIOS Mode	Legacy
BaseBoard Manufacturer	ASUSTeK COMPUTER INC.
BaseBoard Product	H61M-CS
BaseBoard Version	Rev X.0x
Platform Role	Desktop
Secure Boot State	Unsupported
PCR7 Configuration	Binding Not Possible
Windows Directory	C:\Windows
System Directory	C:\Windows\system32
Boot Device	\Device\HarddiskVolume1
Locale	United States
Hardware Abstraction Layer	Version = "10.0.19041.6456"
User Name	DESKTOP-4EDPRTG\tops demo pc
Time Zone	India Standard Time
Installed Physical Memory (RAM)	8.00 GB
Total Physical Memory	7.88 GB
Available Physical Memory	3.70 GB
Total Virtual Memory	9.13 GB
Available Virtual Memory	4.54 GB
Page File Space	1.25 GB
Page File	C:\pagefile.sys
Kernel DMA Protection	Off

The taskbar at the bottom shows the Windows Start button, a search bar, and several application icons. The system tray on the right indicates a temperature of 32°C, partly sunny weather, and the date 24-08-2026.

TASKS:2

Download any official Linux distribution ISO (like Ubuntu or Fedora), and use Rufus or BalenaEtcher to create a bootable USB drive for installation. If you don't have a spare USB, use a virtual machine tool like VirtualBox to mount the ISO and start the installation process virtually.

RESULT

Option 1: Bootable USB

1. Download an official Linux ISO such as **Ubuntu** or **Fedora**.
2. Insert a **spare USB drive** into the computer.
3. Open **Rufus** or **BalenaEtcher**.
4. Select the downloaded Linux **ISO file**.
5. Select your **USB drive** as the target.
6. Click **Start/Flash** and wait until the process finishes.
7. Safely eject the USB after the bootable drive is created.

Option 2: Virtual Machine

1. Install and open **VirtualBox**.
2. Create a **New Virtual Machine**.
3. Select **Linux** as the operating system.
4. Select the downloaded **ISO file** as the installation media.
5. Start the virtual machine.
6. The Linux installer should start inside the virtual machine.

TASKS:3

On a macOS device (or using a macOS virtual machine), open 'System Preferences' and change the desktop wallpaper, then adjust the system language to Hindi or Gujarati

RESULT

fig. change a wallpaper

FIG language and region setting

TASKS:4

Install a fresh copy of Ubuntu Linux (real or virtual machine) and create a new user account named 'gamer'. After installation, enable automatic login for this user and take a screenshot of the login screen showing the username.

RESULT

TASKS:5

Use ChatGPT to generate a step-by-step guide for installing Windows 10 on a laptop, including partitioning tips and post-installation settings for privacy and updates. Follow the guide and note any steps that were unclear or missing.

RESULT

- **Back up important files** before starting the installation.
- Create a **Windows 10 installation USB** using the official Windows ISO and a suitable USB-creation tool.
- Insert the USB into the laptop and **boot from the USB** using the boot menu.
- Select **language, time, and keyboard settings**, then click **Install Now**.
- Enter the product key if available, or choose the option to continue without entering it.
- Select the correct **Windows 10 edition**.
- Choose **Custom: Install Windows only** for a fresh installation.
- **Partitioning:** Select the target drive carefully. For a clean installation, delete only the partitions you have backed up and intend to remove. Avoid deleting recovery or other partitions unless you know exactly what they contain.

- Select the intended unallocated space and click **Next**. Windows will create the required system partitions automatically.
- Wait while Windows copies files and restarts the laptop.
- Complete the initial setup and create your **user account**.
- Connect to the internet and run **Windows Update**.
- Install required **device drivers**, especially graphics, network, audio, and chipset drivers.
- Review **Privacy settings** and disable optional data-sharing features that you do not want.
- Check **Settings → Privacy** and review permissions for location, camera, microphone, and other apps.
- Run Windows Update again until there are **no important updates remaining**.

Things to Note

After following the guide, I would note any unclear or missing steps, such as:

- The exact **boot-menu key** can differ between laptop manufacturers.
- Partitioning requires extra care because deleting the wrong partition can cause **data loss**.
- Some hardware may require **manufacturer-specific drivers** after installation.
- Windows 10 support ended on **October 14, 2025**, so in 2026 a fresh installation should generally use a supported Windows version if the hardware allows it.
