TROUBLESHOOTING AND HELPDESK

DAY5

TASKS:1

A user reports their laptop won't power on even when plugged in. List 5 troubleshooting steps you would take to diagnose the cause, and for each step, explain what you are checking for.

RESULT

Step	**What To Checked**
1. Check the power cable and charger.	To make sure the charger is working properly.
2. Check the power socket.	To make sure electricity is available.
3. Check the charging light on the laptop.	To see if the laptop is getting power.
4. Press and hold the power button for 10 seconds, then try again.	To remove any temporary power problem.
5. Try another charger .	To check if the charger is faulty.

TASKS:2

You receive a helpdesk ticket: 'My monitor is showing a blank screen, but the CPU seems to be running.' Write a step-by-step troubleshooting flow you would follow to identify and resolve the issue.Consider checking both hardware connections and basic display settings.

Comptia A+

RESULT

1. Check that the monitor is turned ON.
2. Check the power cable of the monitor.
3. Check the HDMI/VGA/DisplayPort cable connection.
4. Make sure the monitor is connected to the correct port.
5. Restart the computer.
6. Press **Windows + P** and select Duplicate or PC Screen Only.
7. If the problem continues, test with another monitor or cable.

TASKS:3

A user complains that their wireless mouse is unresponsive, but the keyboard works fine. Describe how you would isolate whether the issue is with the mouse, the USB port, or the system settings.

RESULT

1. Check if the mouse battery is low and replace it if needed.
2. Turn the mouse OFF and ON again.
3. Remove and reconnect the USB receiver.
4. Try another USB port.
5. Test the mouse on another computer.
6. Check Bluetooth or mouse settings (if it is a Bluetooth mouse).

TASKS:4

Imagine you are working on a helpdesk team for a gaming cafe. One system is overheating and shutting down during use. List 3 possible hardware causes and describe how you would check each one.Think about fans, dust, and thermal paste.

Comptia A+

RESULT

Hardware Cause	How to Check
Dust inside the computer	Open the cabinet and clean the dust using compressed air or a soft brush.
CPU or GPU fan not working	Check whether the fan is spinning properly. Replace it if it is not working.
Dry or old thermal paste	Remove the old thermal paste and apply new thermal paste between the CPU and heatsink.
